

Dividing a Fraction by a Whole Number:

$$\frac{1}{6} \div 2 = \boxed{\phantom{000}}$$

$$\frac{2}{3} \div 4 = \boxed{\phantom{000}}$$

**KCF**

$$\frac{1}{6} \div \frac{2}{1} =$$

$$\frac{1}{6} \times \frac{1}{2} =$$

Diagram illustrating the KCF method: a red curved arrow labeled 'x' points from the denominator 6 of the first fraction to the numerator 1 of the second fraction. Another red curved arrow labeled 'x' points from the denominator 2 of the second fraction to the numerator 1 of the first fraction.
